Problem Statement

Hidden Failure in Everyday Banking

The Hidden Cause of Debit Order Failures

Assumption:

Debit order failures = insufficient funds

Reality:

Many failures are caused by structural timing frictions:

- ❖ Settlement delays
- ❖ Cut-off times

Customers may appear liquid , yet transactions fail.

Impact:

- ❖ Penalty fees and Service interruptions
- ❖ Trust erosion

Essential obligations (insurance, loans) are disproportionately affected.

Two Risks, One Blunt Response

Today, two very different scenarios are treated the same:

Risk Type	Description	Triggers / Outcomes
Payment Orchestration Risk	Funds exist, but timing causes failure	❖ Low-balance alerts ❖ Generic credit visibility ❖ Post-failure explanations
Short-Duration Liquidity Risk	Funds genuinely unavailable within a narrow window	

The Missing Layer

Predictive Systems

- Nav»Money
- Cashflow forecasting
- Shortfall alerts

The Gap

There is no integrated layer that:

- Interprets shortfall context
- Differentiates timing vs liquidity risk
- Matches risk type to proportionate action
- Provides pre-failure clarity

Credit Infrastructure

- Overdrafts
- Temporary facilities
- Loan products

Prediction exists. Credit exists.
Contextual decision intelligence does not.

Research and Findings

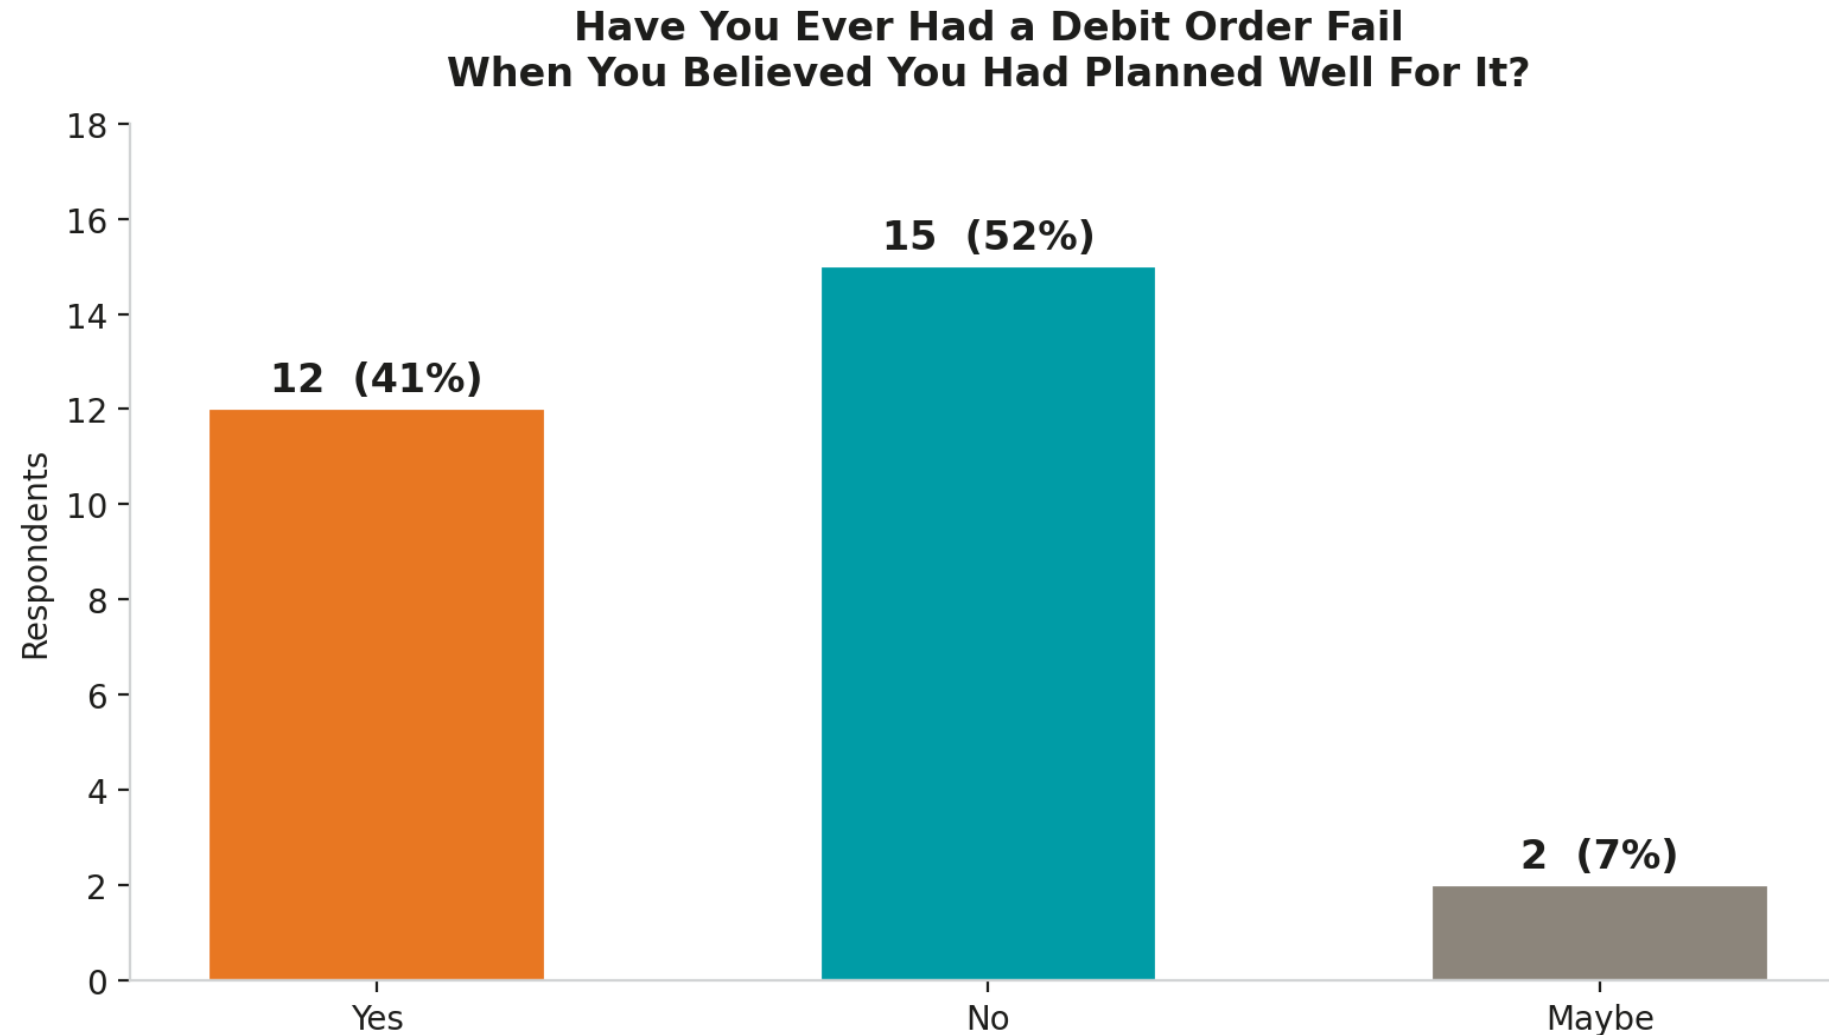

QUANTIFYING THE PROBLEM AND ITS IMPACT

- ❖ To better understand customers' sentiment around debit order interactions, and quantify how these experiences influence overall satisfaction, we conducted a survey that captured 29 responses from non-FNB channels.
- ❖ The purpose of the survey was to validate whether the challenges we've identified have a meaningful effect on customers and to gain insight into where pain points and opportunities for improvement truly lie.

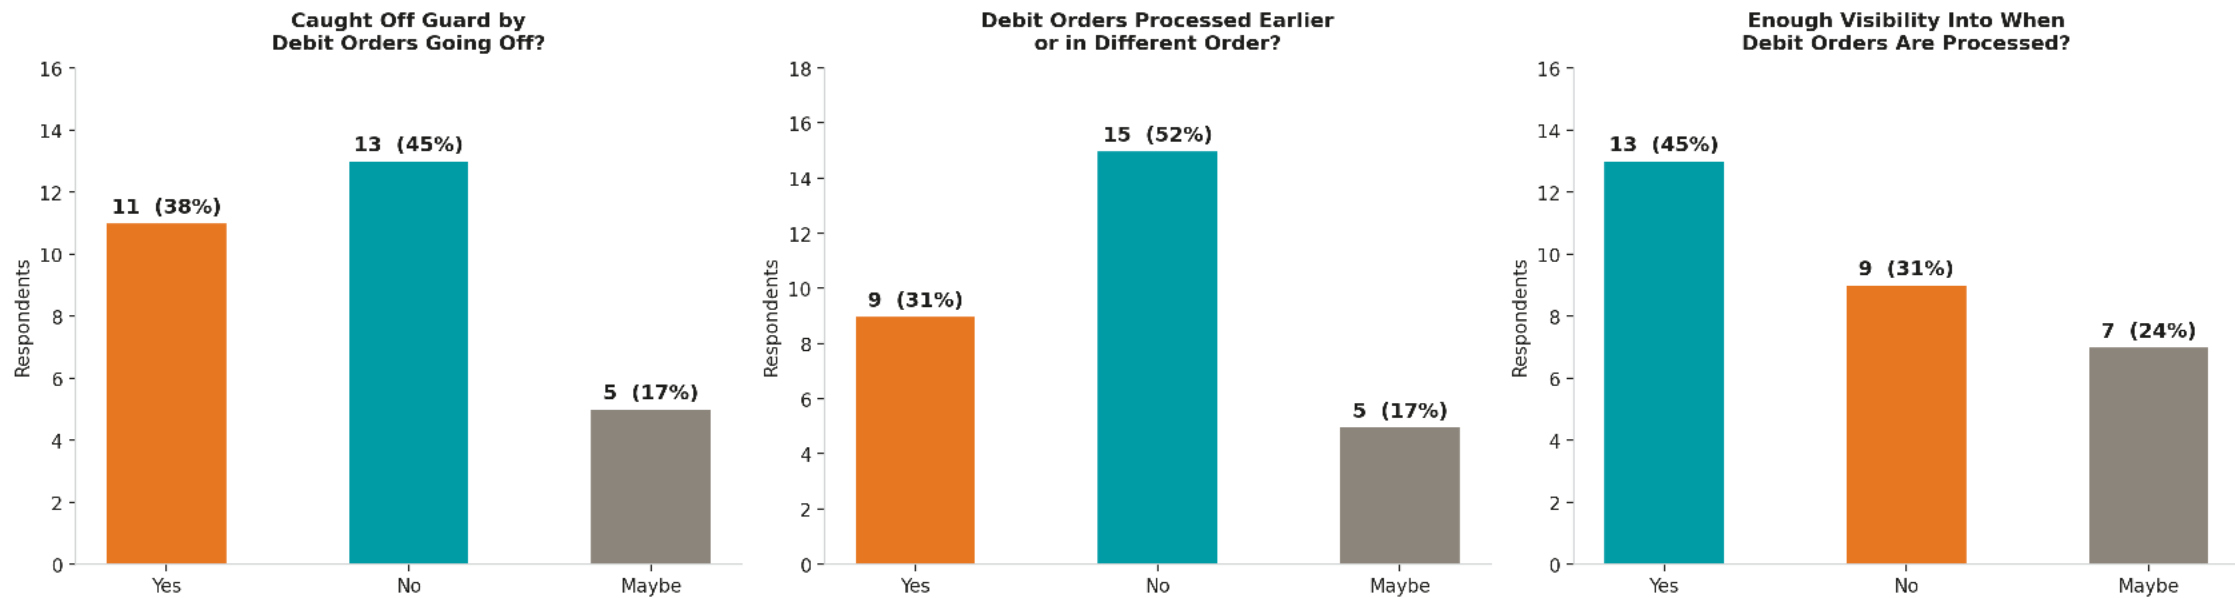

Prevalence of Debit order Failures

KEY INSIGHT: 48% of respondents have experienced a debit order failing even though they planned well (Yes + Maybe)

Timing Issues and Visibility Gap

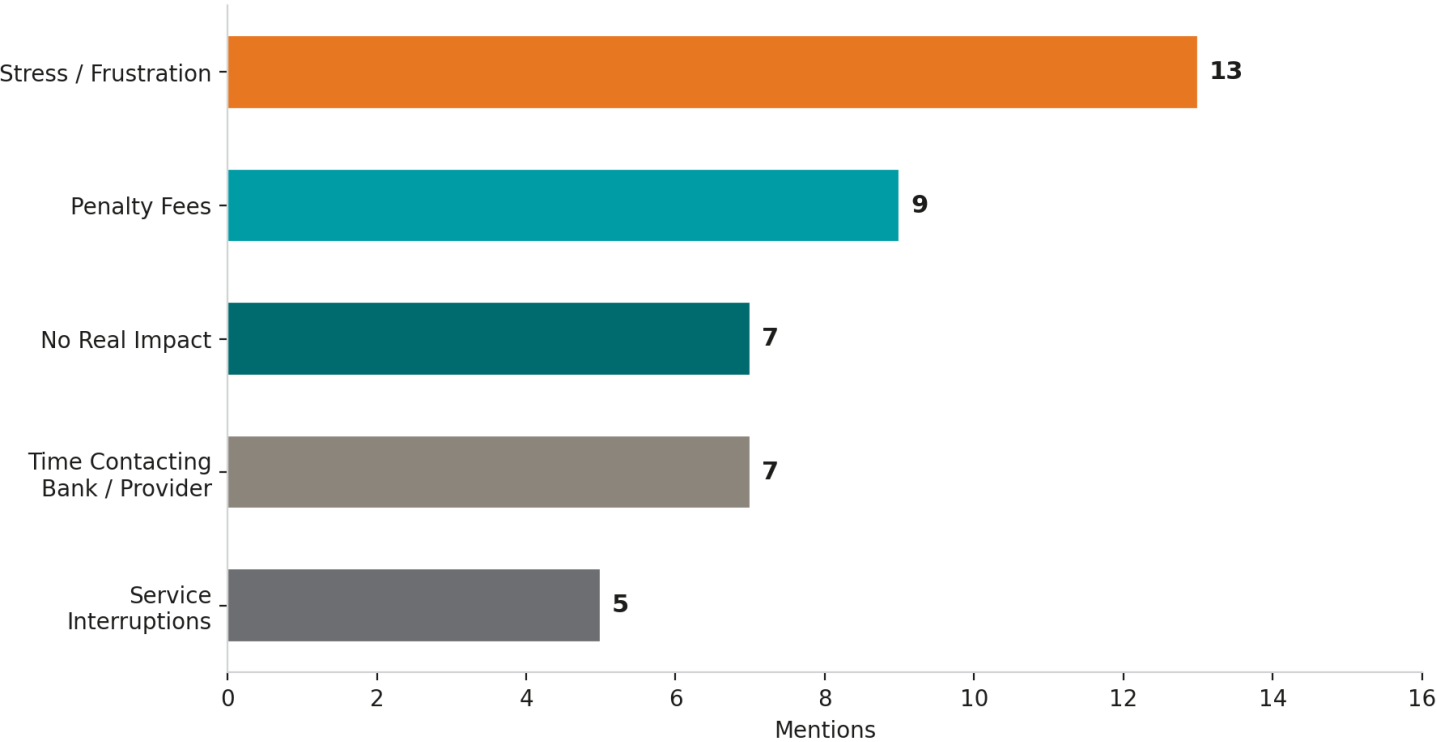

KEY INSIGHT: 55% are caught off guard | 48% experience unexpected timing | 55% lack visibility or are unsure

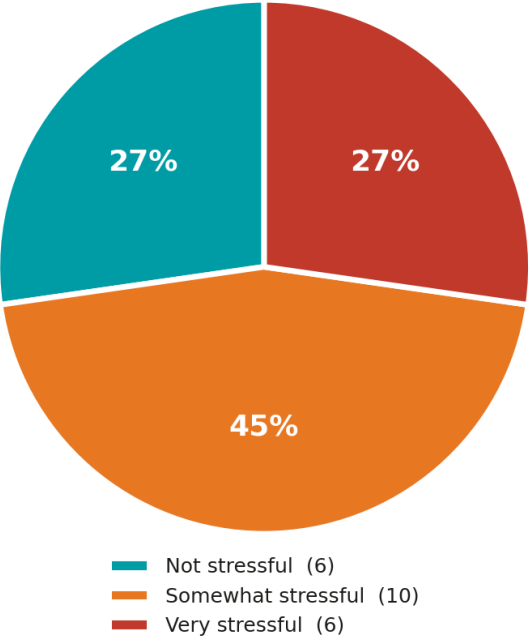

Consequences of Debit Order Failures

Types of Consequences Experienced

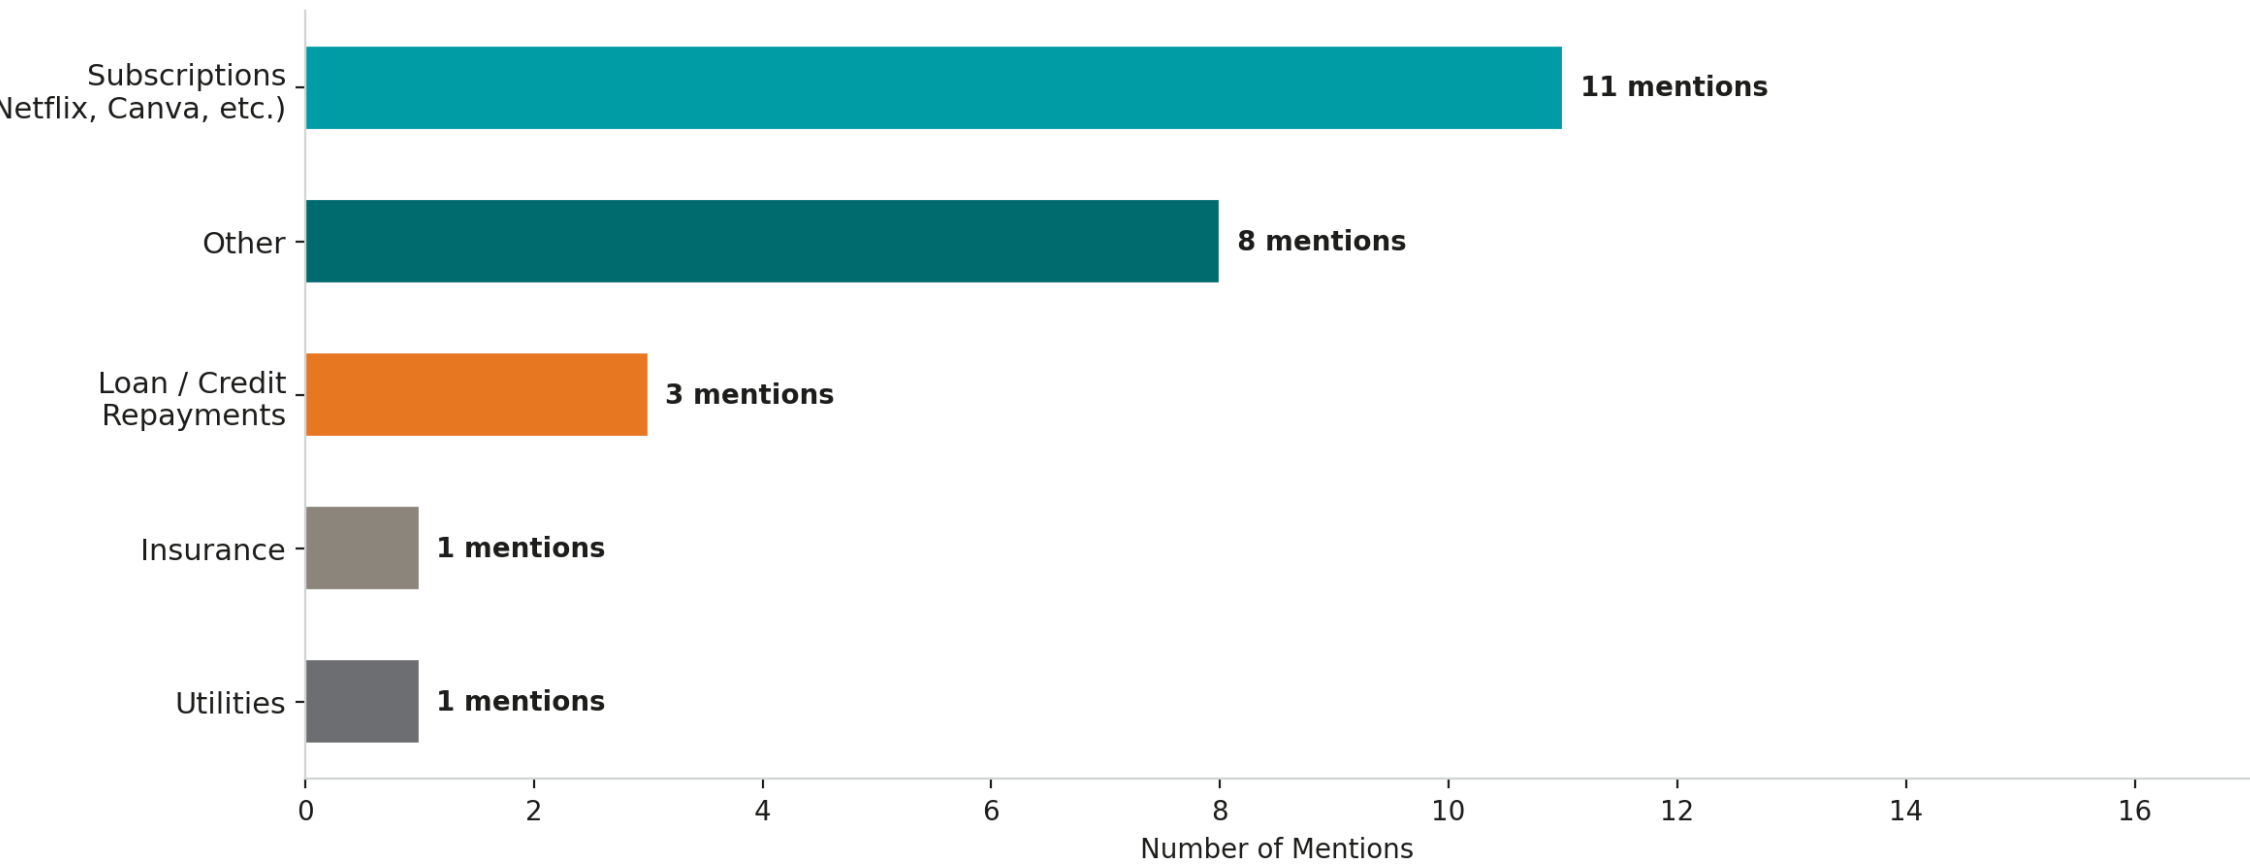

KEY INSIGHT: Stress/frustration is the #1 consequence | 73% of respondents find failures at least somewhat stressful

How Stressful Are Unexpected Failures?

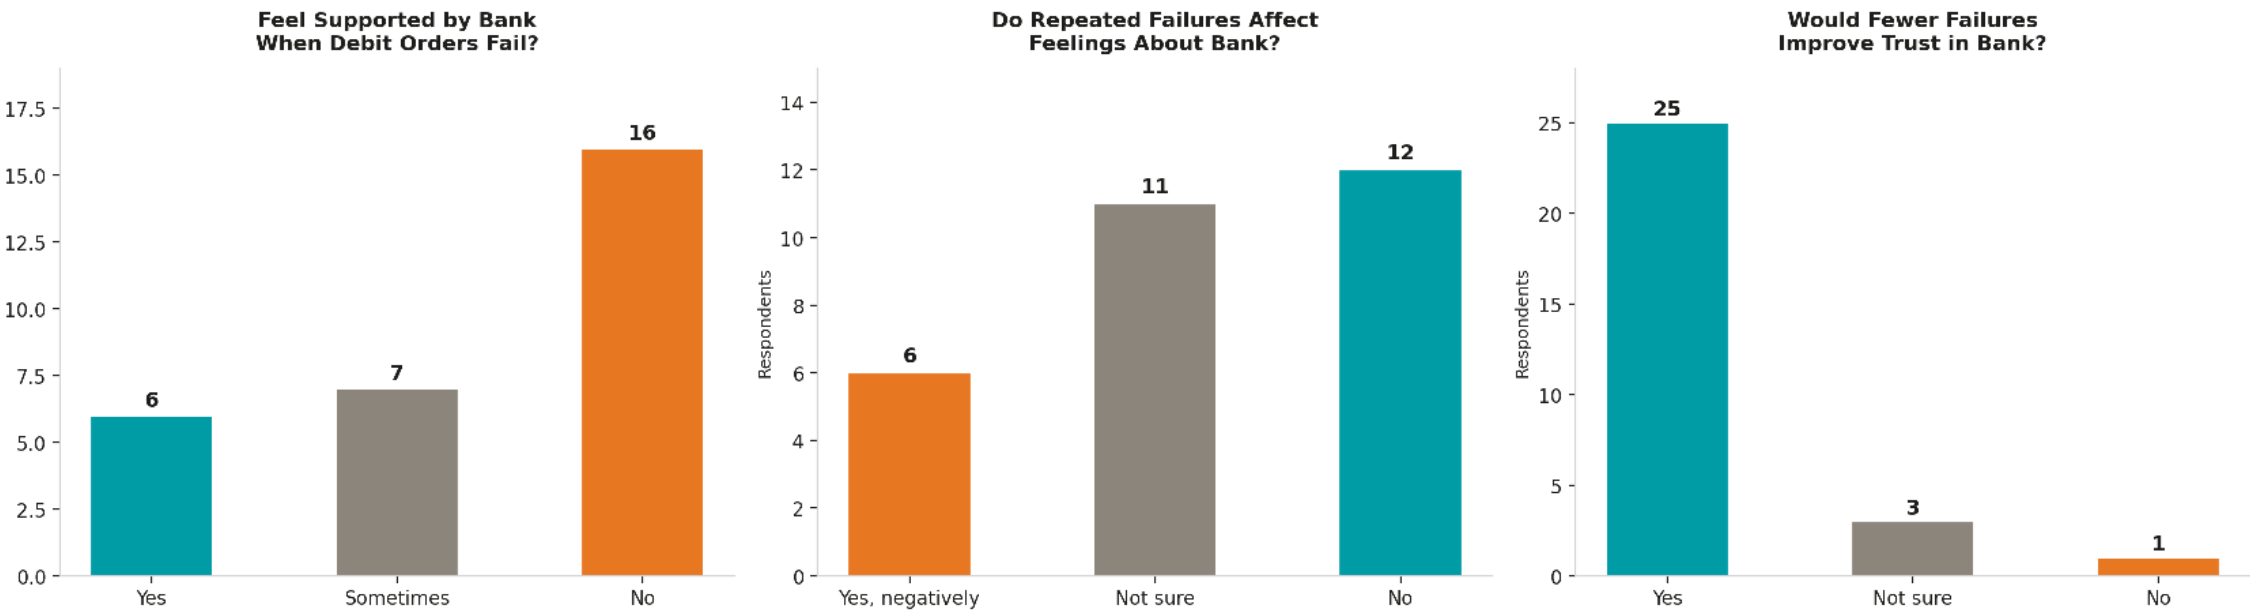

Categories of Debit Order Most Likely to Fail

KEY INSIGHT: Subscriptions are the most common failed debit order type, followed by loan repayments and other categories

Satisfaction with Bank When Debit Orders Fail

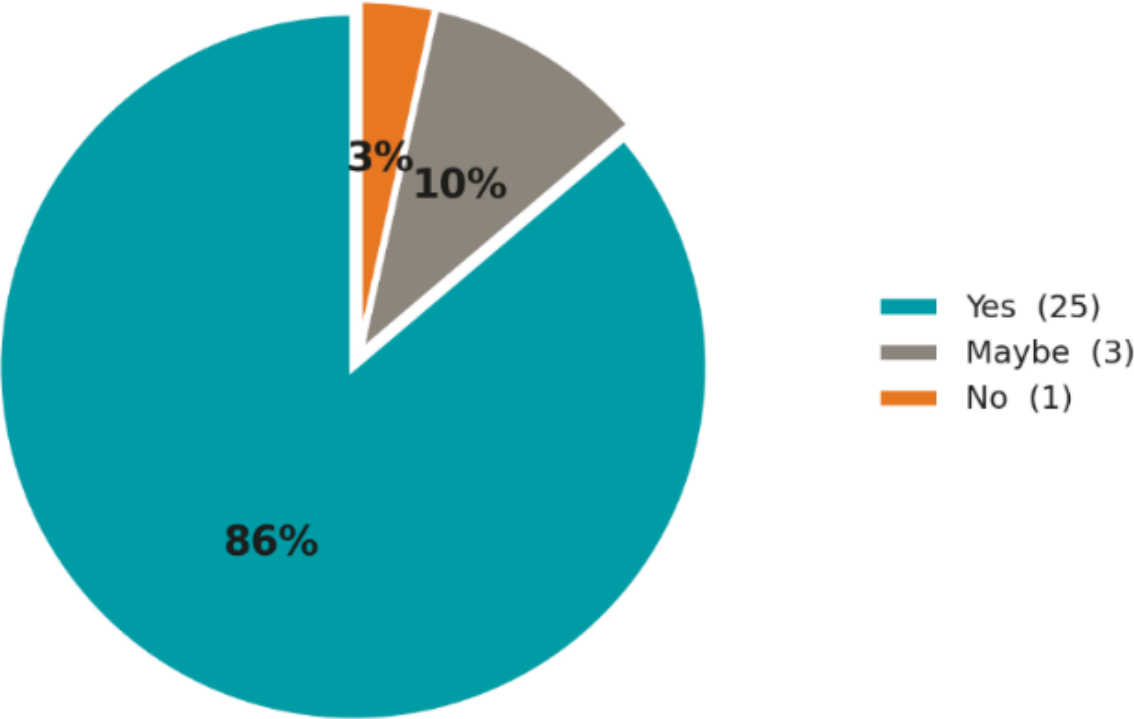

KEY INSIGHT: 55% do not feel supported by their bank | 86% say fewer failures would improve trust

Demand for a Predictive Debit Order Service

Would Knowing a Debit Order Is Likely to Fail Ahead of Time Be Useful?

KEY INSIGHT: 86% of respondents want predictive debit order failure alerts – a clear product opportunity

Solution

Introducing PaySure

PaySure = Predict → Protect → Optimise

PaySure is a predictive financial protection layer built inside FNB's ecosystem.

It integrates:

- nav»Money predictive cashflow modelling
- inContact real-time notifications
- Existing FNB credit facilities
- Behavioural risk and affordability scoring

Instead of reacting to failed debit orders, PaySure:

- Detects risk before failure
- Distinguishes timing risk from genuine shortfall
- Guides customers to the lowest-risk solution

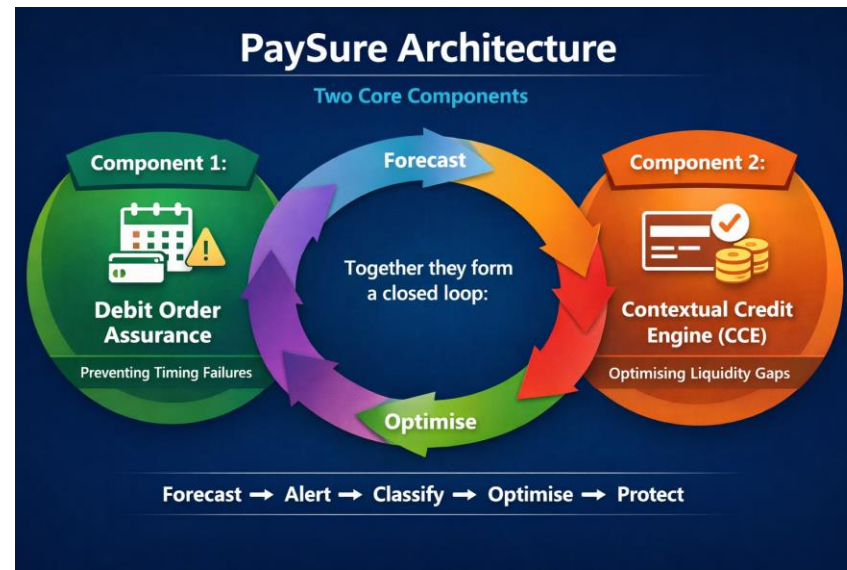

Two Core Components

Component 1: Debit Order Assurance

Prevents failures caused by timing and visibility gaps.

Component 2: Contextual Credit Engine (CCE)

Optimises credit guidance when genuine liquidity gaps exist.

Component 1 – Debit Order Assurance

What It Solves

- Customers don't know what debit orders are coming
- They don't see projected balance impact
- They react after failure

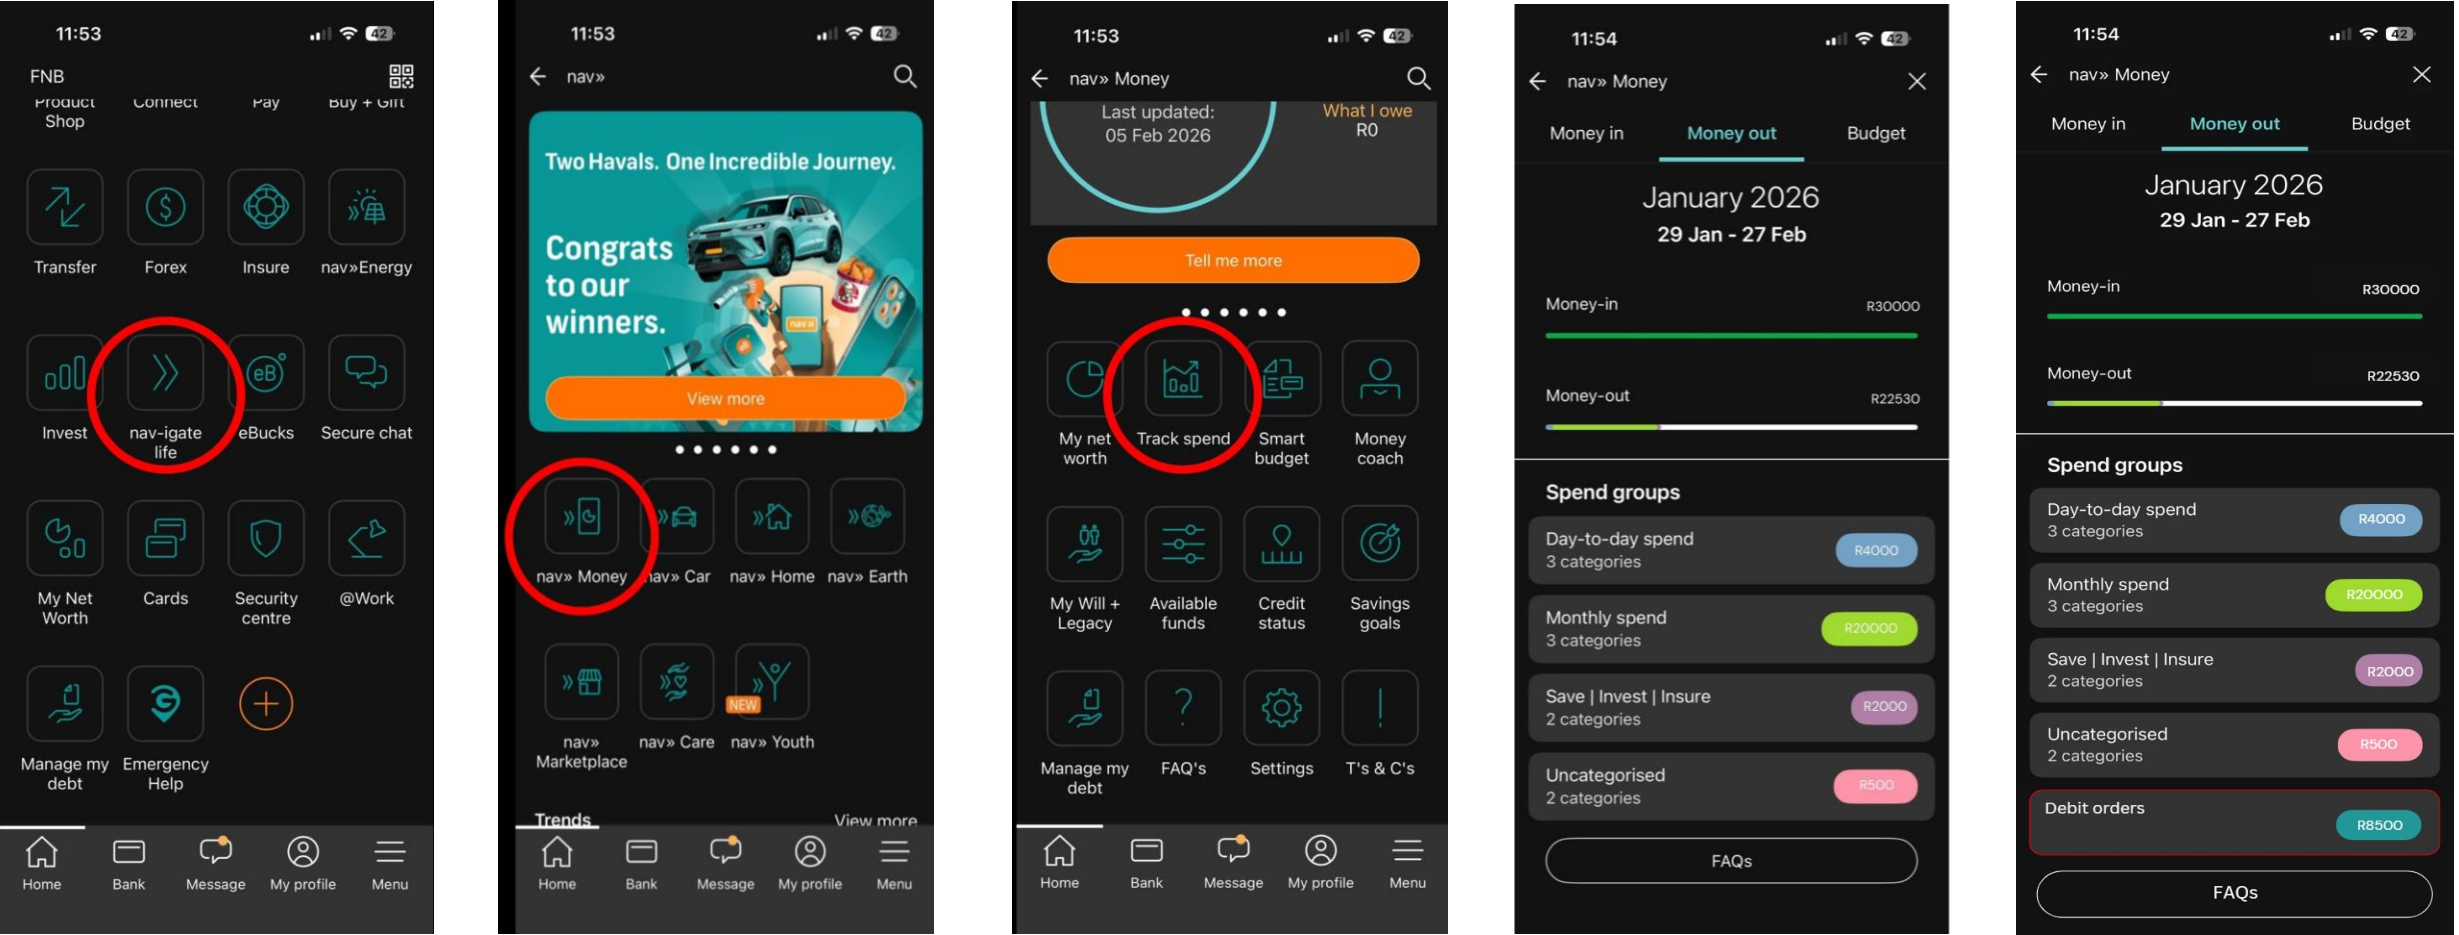

What It Does

- Shows upcoming debit obligations inside nav»Money
- Sends pre-debit notifications (2–10 days prior)
- Projects balance after debit
- Alerts when shortfall risk is predicted

This addresses **Payment Orchestration Risk**.

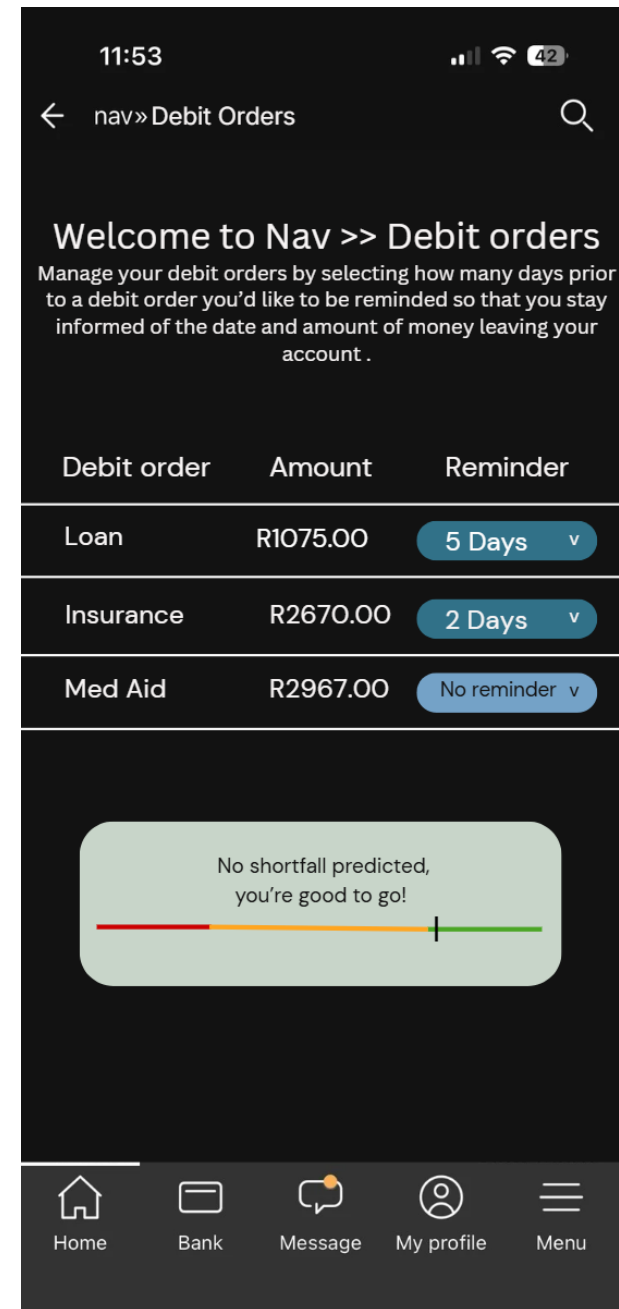

Nav » Money → Upcoming Debit Orders

Customer can:

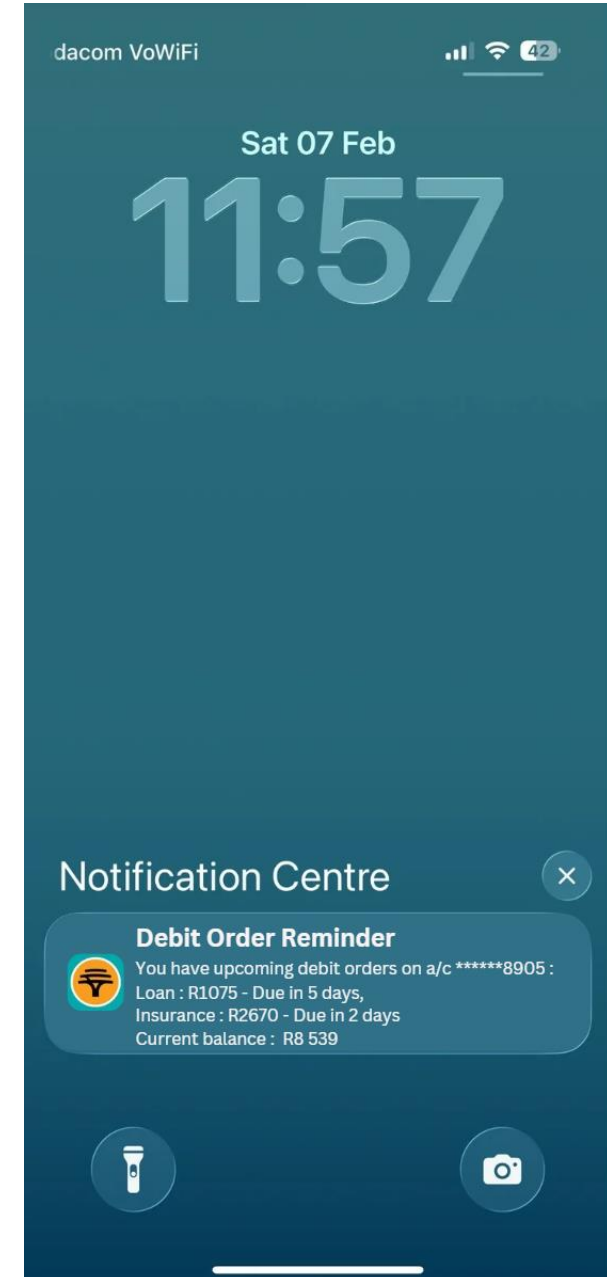

- ❖ View all scheduled debit orders
- ❖ See projected post-debit balance
- ❖ Identify shortfall risk visually
- ❖ Customise notification timing

Smart Notifications via inContact/App

Notification preview

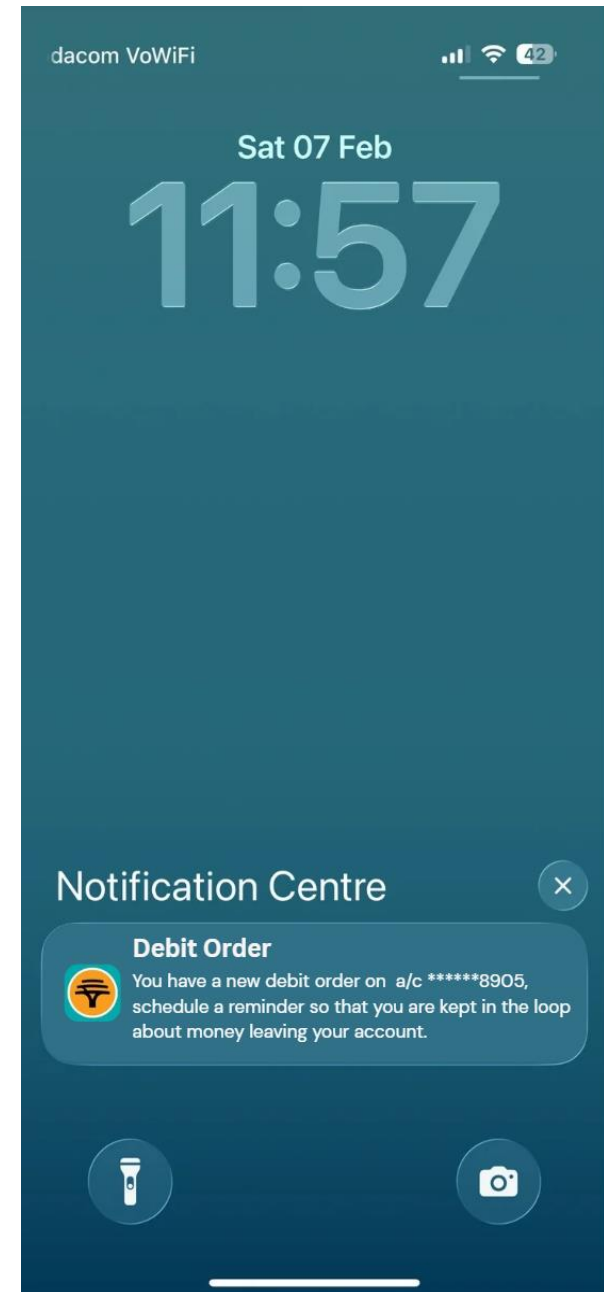

- ❖ Account number
- ❖ Debit order title, amount and when it is due
- ❖ Current account balance

If new debit is authorised:

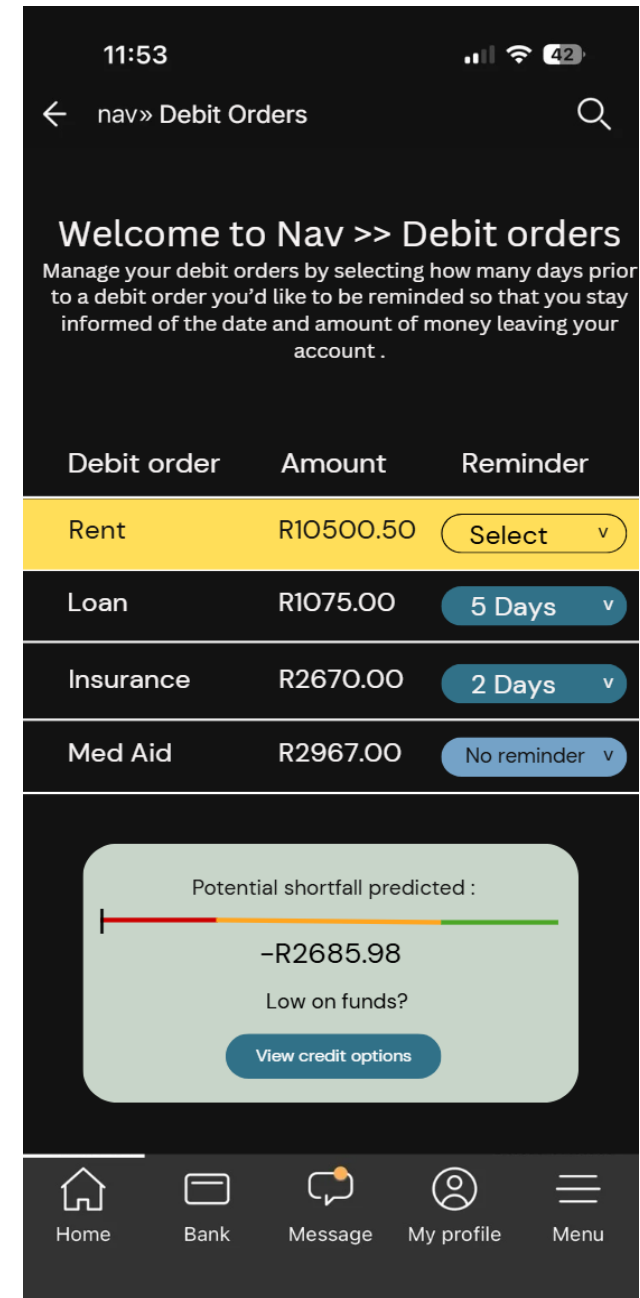

- ❖ Customer is alerted immediately
- ❖ Asked to schedule reminder
- ❖ Gains visibility from day one

This closes the visibility gap entirely.

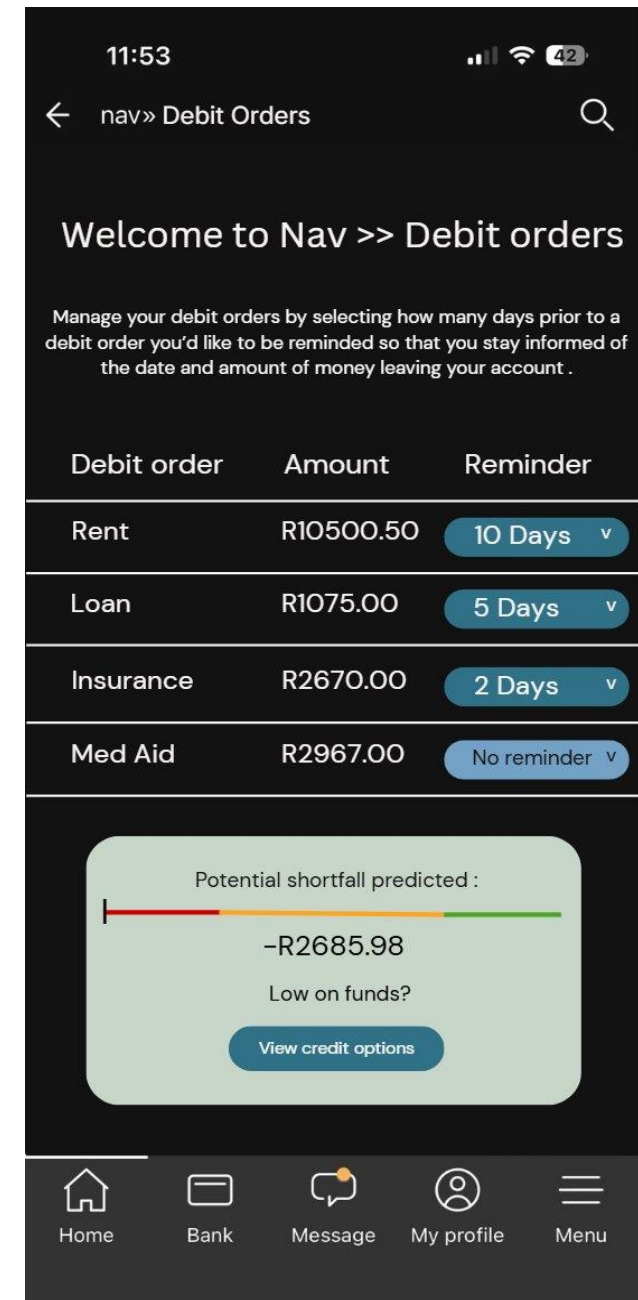

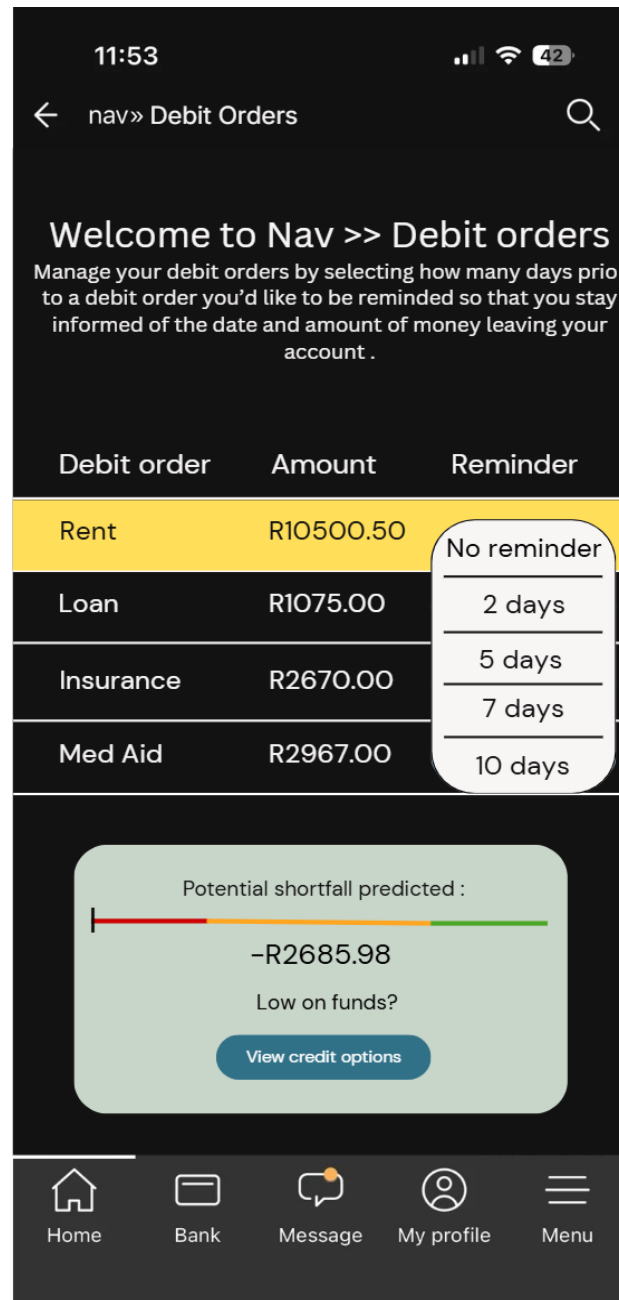

Walkthrough

- ❖ New debit order is highlighted
- ❖ New debit order required reminder to be scheduled
- ❖ Potential shortfall of funds predicted due to new debit order
 - R2 685,98 shortfall post debit order payments

- ❖ The customer may select a pre-debit order reminder based on personal preference
- ❖ The customer may also opt to not be reminded

Component 2 – Contextual Credit Engine

When Funds Truly Don't Exist

If liquidity risk is confirmed:

The system asks:

“What is the lowest-risk way to prevent this failure?”

Not:

“Do you qualify for a loan?”

CCE transforms credit from product push to contextual optimisation.

This addresses **Short-Duration Liquidity Risk**

Three-stage logic:

- **Event Classification**

- Timing risk? → No credit needed
- Genuine shortfall? → Proceed

- **Repayment Certainty Index (RCI)**

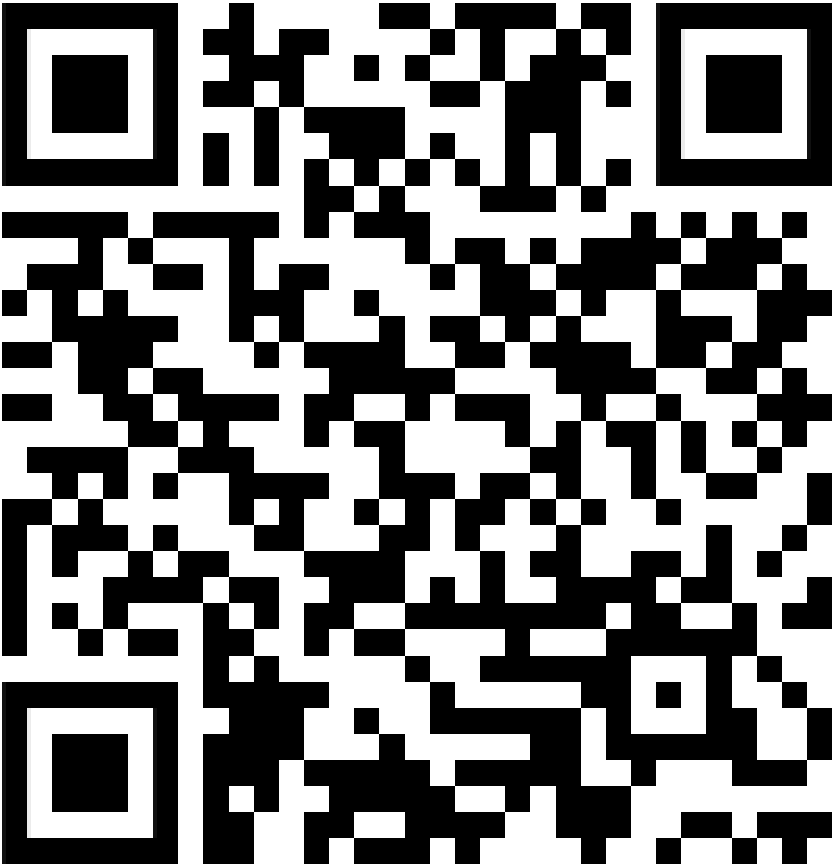

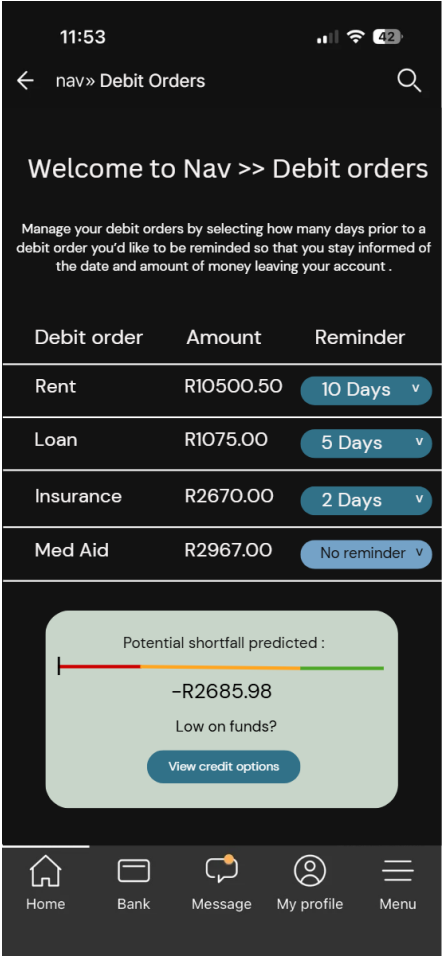

- Measures short-horizon repayment confidence
- Tiered (T1–T4)

- **Product Optimisation**

- Simulates overdraft, credit card, temp loan, salary advance
- Calculates Risk-Adjusted Liquidity Cost (RALC)
- Recommends lowest-risk option

Walkthrough

Strategic Impact

Why this matters

PaySure reshapes debit-order economics.

Between Apr 2024 – Jan 2026:

- ❖ 233 million debit orders processed
- ❖ 19.54% failure rate
- ❖ ~12 million failures annually

Even a 1% improvement = massive impact.

Competitive and Strategic Landscape

Customers today want financial insight, not just information.

BANK	PREDICTION	VISIBILITY	PROACTIVITY	KEY GAP										
FNB	✓	△	△	Lack a proactive element to its money management tool										
Standard Bank	△	✓	△	Do not have predictive balance forecasting										
Discovery Bank	△	△	✓	Do not integrate alerts into their budgeting engine nor have any balance forecasting										
ABSA	X	△	X	Supports savings management, not budgeting with proactive or predictive elements										
Nedbank	X	△	?	No proactive or predictive elements										
Capitec	X	X	X	No money management tools										
<table> <tr> <th>KEY</th><th>STRONG CAPABILITY</th><th>PARTIAL CAPABILITY</th><th>NOT OFFERED</th><th>NOT KNOWN</th></tr> <tr> <td></td><td>✓</td><td>△</td><td>X</td><td>?</td></tr> </table>					KEY	STRONG CAPABILITY	PARTIAL CAPABILITY	NOT OFFERED	NOT KNOWN		✓	△	X	?
KEY	STRONG CAPABILITY	PARTIAL CAPABILITY	NOT OFFERED	NOT KNOWN										
	✓	△	X	?										

IDEAS LIKE THESE CONTINUE TO POSITION FNB AS A FORERUNNER IN PERSONALISED BANKING

Conclusion

Customer benefits:

- ❖ Early visibility of upcoming debit orders and potential shortfalls.
- ❖ Reduced penalty fees and failed payments.
- ❖ Improved financial control and planning.
- ❖ Responsible, contextual financial support.

Bank benefits:

- ❖ Increased debit order success rates.
- ❖ Reduced disputes and operational costs.
- ❖ Improved customer satisfaction, trust and retention.
- ❖ Stronger revenue protection and liquidity stability.

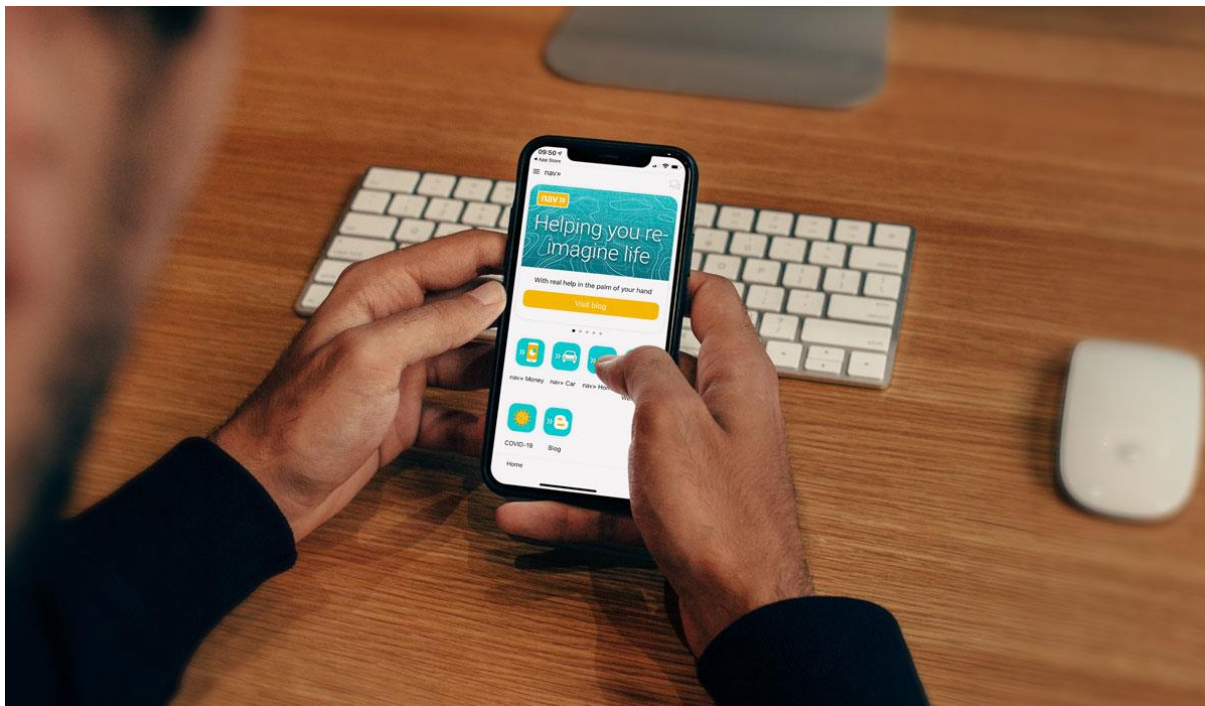

Conclusion

Final strategic recommendation:

- ❖ Pilot PaySure within the FNB digital ecosystem.
- ❖ Leverage predictive insights to prevent payment failures.
- ❖ Position FNB as a leader in predictive financial intelligence.

THANK YOU.
